Check to see if regular account works:
**I entered in account id 72354**
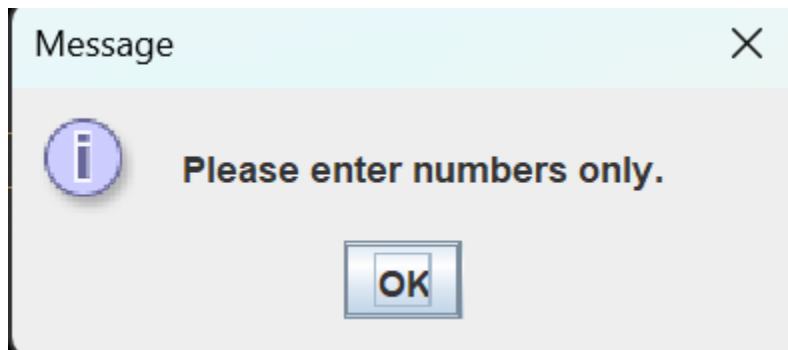

Message   ✕

(i)   **Account type Regular**

                    OK

This is what i get if i deposit $50.50

Message   ✕

(i)   **Account 72354 balance: $153.06**

                    OK
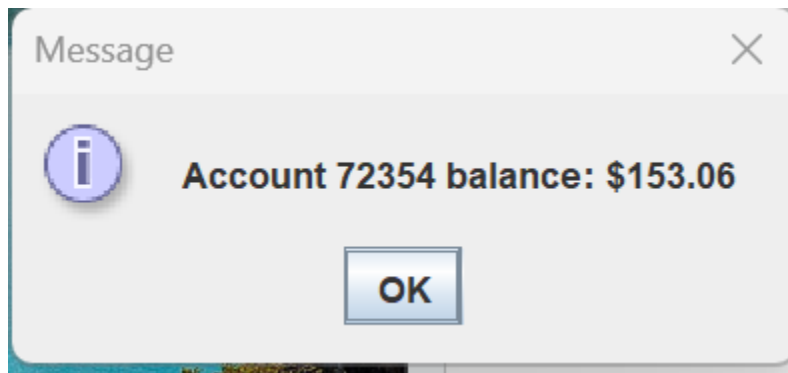

This is what i get if i withdraw $300

Message   ✕

(i)   **Account 72354 balance: $-146.0-94**

                    OK
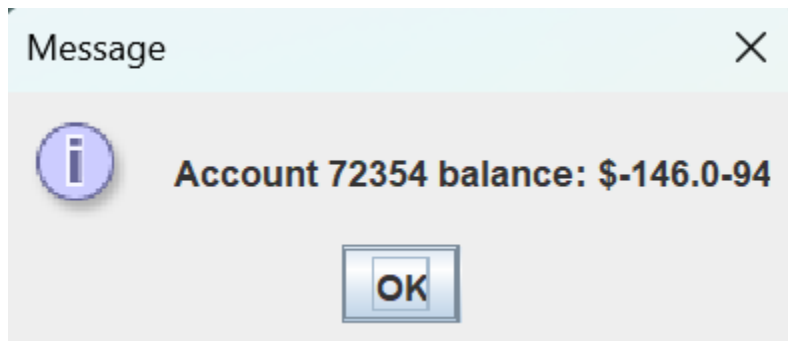

**This is what I get if you enter an invalid amount to deposit or to withdraw (i.e. letters instead of numbers):**

Message ✕

ⓘ   Please enter numbers only.

OK

This is what I get if I check balance:

Message ✕

ⓘ   Account 72354 balance: $-146.0-94

OK
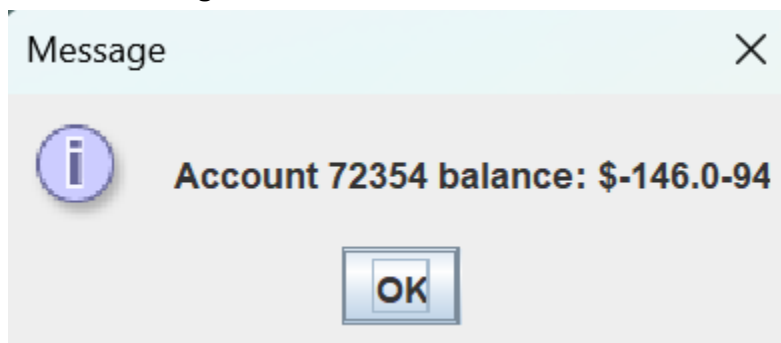

This is what happens if i click exit, x button, or cancel:

Message ✕

ⓘ   Exiting

OK

This is what happens if I enter in an account ID that is not found in the bank

Message   ✕

ⓘ   Result of the Validation: Account not found in bank, please enter the ID correctly.

OK
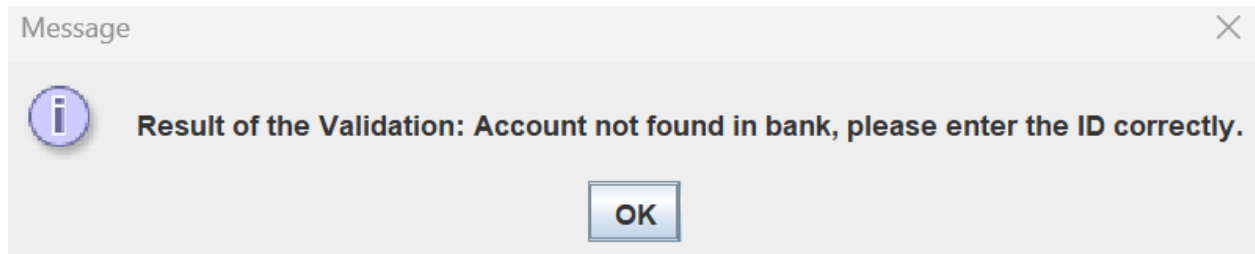

THis is what happens if I enter in an id that corresponds to a checking account

Message   ✕

ⓘ   **Account type Checking**

OK
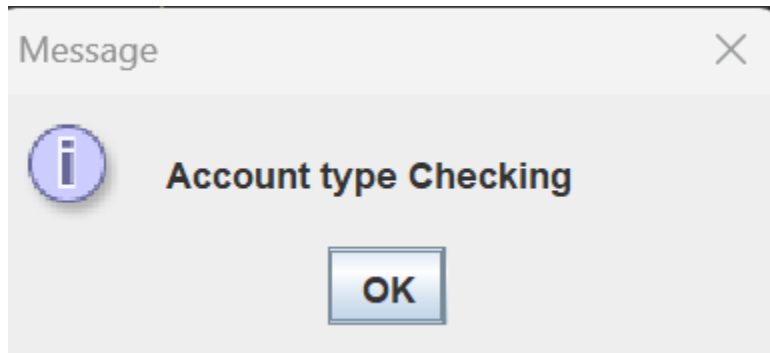

THis is what happens if I withdraw too much and it exceeds the overdraft maximum + the balance:

Message   ✕

ⓘ   **Withdraw amount exceeds overdraft maximum!**

OK
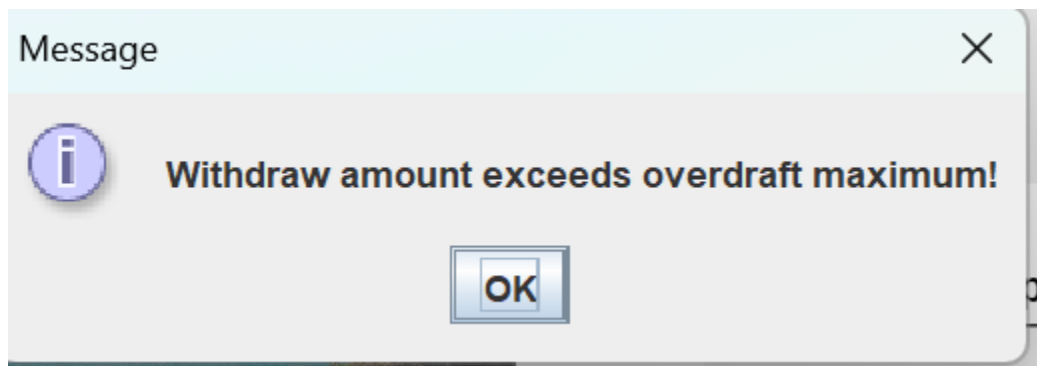

The rest of the operations is the same as the original account (deposit, check balance, exit)

Here is the output if I invoke the IOHandlerStandard constructor instead of dialog box (I copy and pasted the output from terminal to this doc)
